

**Contents****1 Introduction**

1.1 Overview .....	
1.2 Human and Computer Vision .....	
1.3 The Human Vision System .....	
1.3.1 The Eye .....	
1.3.2 The Neural System .....	
1.3.3 Processing .....	
1.4 Computer Vision Systems .....	
1.4.1 Cameras .....	
1.4.2 Computer Interfaces .....	
1.5 Processing Images .....	
1.5.1 Processing .....	
1.5.2 Hello Python, Hello Images! .....	
1.5.3 Mathematical Tools .....	
1.5.4 Hello Matlab .....	
1.6 Associated Literature .....	
1.6.1 Journals, Magazines and Conferences .....	
1.6.2 Textbooks .....	
1.6.3 The Web .....	
1.7 Conclusions .....	
1.8 Chapter 1 References .....	

**2 Images, Sampling and Frequency Domain Processing**

2.1 Overview .....	
2.2 Image Formation .....	
2.3 The Fourier Transform .....	
2.4 The Sampling Criterion .....	
2.5 The Discrete Fourier Transform (DFT) .....	
2.5.1 One Dimensional Transform .....	
2.5.2 Two Dimensional Transform .....	
2.6 Properties of the Fourier Transform .....	
2.6.1 Shift Invariance .....	
2.6.2 Rotation .....	
2.6.3 Frequency Scaling .....	
2.6.4 Superposition (Linearity) .....	
2.6.5 The Importance of Phase .....	
2.7 Transforms other than Fourier .....	
2.7.1 Discrete Cosine Transform .....	
2.7.2 Discrete Hartley Transform .....	
2.7.3 Introductory Wavelets .....	
2.7.3.1 Gabor Wavelet .....	
2.7.3.2 Haar Wavelet .....	
2.7.4 Other Transforms .....	
2.8 Applications using Frequency Domain Properties .....	
2.9 Further Reading .....	

2.10 Chapter 2 References .....	
---------------------------------	--

**3 Basic Image Processing Operations**

3.1 Overview .....	
3.2 Histograms .....	
3.3 Point Operators .....	
3.3.1 Basic Point Operations .....	
3.3.2 Histogram Normalisation .....	
3.3.3 Histogram Equalisation .....	
3.3.4 Thresholding .....	
3.4 Group Operations .....	
3.4.1 Template Convolution .....	
3.4.2 Averaging Operator .....	
3.4.3 On Different Template Size .....	
3.4.4 Template Convolution via the Fourier Transform .....	
3.4.5 Gaussian Averaging Operator .....	
3.4.6 More on Averaging .....	
3.5 Other Image Processing Operators .....	
3.5.1 Median Filter .....	
3.5.2 Mode Filter .....	
3.5.3 Non-Local Means .....	
3.5.4 Bilateral filtering .....	
3.5.5 Anisotropic Diffusion .....	
3.5.6 Comparison of Smoothing Operators .....	
3.5.7 Force Field Transform .....	
3.5.8 Image Ray Transform .....	
3.6 Mathematical Morphology .....	
3.6.1 Morphological Operators .....	
3.6.2 Grey Level Morphology .....	
3.6.3 Grey Level Erosion and Dilation .....	
3.6.4 Minkowski Operators .....	
3.7 Further Reading .....	
3.8 Chapter 3 References .....	

**4 Low-Level Feature Extraction (including Edge Detection)**

4.1 Overview .....	
4.2 Edge Detection .....	
4.2.1 First Order Edge Detection Operators .....	
4.2.1.1 Basic Operators .....	
4.2.1.2 Analysis of the Basic Operators .....	
4.2.1.3 Prewitt Edge Detection Operator .....	
4.2.1.4 Sobel Edge Detection Operator .....	
4.2.1.5 The Canny Edge Detector .....	
4.2.2 Second Order Edge Detection Operators .....	
4.2.2.1 Motivation .....	
4.2.2.2 Basic Operators: The Laplacian .....	

4.2.2.3	The Marr-Hildreth Operator .....	
4.2.3	Other Edge Detection Operators .....	
4.2.4	Comparison of Edge Detection Operators .....	
4.2.5	Further Reading on Edge Detection .....	
4.3	Phase Congruency .....	
4.4	Localised Feature Extraction .....	
4.4.1	Detecting Image Curvature (Corner Extraction) .....	
4.4.1.1	Definition of Curvature .....	
4.4.1.2	Computing Differences in Edge Direction .....	
4.4.1.3	Measuring Curvature by Changes in Intensity (Differentiation) .....	
4.4.1.4	Moravec and Harris Detectors .....	
4.4.1.5	Further Reading on Curvature .....	
4.4.2	Feature Point Detection; Region/Patch Analysis .....	
4.4.2.1	Scale Invariant Feature Transform (SIFT) .....	
4.4.2.2	Speeded Up Robust Features (SURF) .....	
4.4.2.3	FAST, ORB, FREAK, LOCKY and other keypoint detectors .....	
4.4.2.4	Other Techniques and Performance Issues .....	
4.4.3	Saliency .....	
4.4.3.1	Basic Saliency .....	
4.4.3.2	Context Aware Saliency .....	
4.4.3.3	Other Saliency Operators .....	
4.5	Describing Image Motion .....	
4.5.1	Area-based approach .....	
4.5.2	Differential approach .....	
4.5.3	Recent Developments: Deepflow, Epicflow and extensions .....	
4.5.4	Analysis of Optical Flow .....	
4.6	Further Reading .....	
4.7	Chapter 4 References .....	

## 5 High-Level Feature Extraction: Fixed Shape Matching

5.1	Overview .....	
5.2	Thresholding and Subtraction .....	
5.3	Template Matching .....	
5.3.1	Definition .....	
5.3.2	Fourier Transform Implementation .....	
5.3.3	Discussion of Template Matching .....	
5.4	Feature Extraction by Low Level Features .....	
5.4.1	Appearance-Based Approaches .....	
5.4.1.1	Object Detection by Templates .....	
5.4.1.2	Object Detection by Combinations of Parts .....	
5.4.2	Distribution-Based Descriptors .....	
5.4.2.1	Description by Interest Points (SIFT, SURF, BRIEF) .....	
5.4.2.2	Characterising Object Appearance and Shape .....	
5.5	Hough Transform (HT) .....	
5.5.1	Overview .....	
5.5.2	Lines .....	
5.5.3	HT for Circles .....	
5.5.4	HT for Ellipses .....	

5.5.5	Parameter Space Decomposition .....	
5.5.5.1	Parameter space reduction for lines .....	
5.5.5.2	Parameter space reduction for circles .....	
5.5.5.3	Parameter space reduction for ellipses .....	
5.5.6	Generalised Hough Transform (GHT) .....	
5.5.6.1	Formal Definition of the GHT .....	
5.5.6.2	Polar definition .....	
5.5.6.3	The GHT Technique .....	
5.5.6.4	Invariant GHT .....	
5.5.7	Other Extensions to the HT .....	
5.6	Further Reading .....	
5.7	Chapter 5 References .....	

## 6 High-Level Feature Extraction: Deformable Shape Analysis .....

6.1	Overview .....	
6.2	Deformable Shape Analysis .....	
6.2.1	Deformable Templates .....	
6.2.2	Parts-based Shape Analysis .....	
6.3	Active Contours (Snakes) .....	
6.3.1	Basics .....	
6.3.2	The Greedy Algorithm for Snakes .....	
6.3.3	Complete (Kass) Snake Implementation .....	
6.3.4	Other Snake Approaches .....	
6.3.5	Further Snake Developments .....	
6.3.6	Geometric Active Contours (Level-Set Based Approaches) .....	
6.4	Shape Skeletonisation .....	
6.4.1	Distance Transforms .....	
6.4.2	Symmetry .....	
6.5	Flexible Shape Models – Active Shape and Active Appearance .....	
6.6	Further Reading .....	
6.7	Chapter 6 References .....	

## 7 Object Description

7.1	Overview and Invariance Requirements .....	
7.2	Boundary Descriptions .....	
7.2.1	Boundary and Region .....	
7.2.2	Chain Codes .....	
7.2.3	Fourier Descriptors .....	
7.2.3.1	Basis of Fourier Descriptors .....	
7.2.3.2	Fourier Expansion .....	
7.2.3.3	Shift invariance .....	
7.2.3.4	Discrete computation .....	
7.2.3.5	Cumulative Angular Function .....	
7.2.3.6	Elliptic Fourier Descriptors .....	
7.2.3.7	Invariance .....	
7.3	Region Descriptors .....	
7.3.1	Basic Region Descriptors .....	

7.3.2	Moments.....	
7.3.2.1	Definition and Properties.....	
7.3.2.2	Geometric Moments.....	
7.3.2.3	Geometric Complex Moments and Centralised Moments.....	
7.3.2.4	Rotation and Scale Invariant Moments.....	
7.3.2.5	Zernike Moments.....	
7.3.2.6	Tchebichef Moments.....	
7.3.2.7	Krawtchouk Moments.....	
7.3.2.8	Other Moments.....	
7.4	Further Reading.....	
7.5	Chapter 7 References.....	

## 8 Region Based Analysis

8.1	Overview.....	
8.2	Region-Based Analysis.....	
8.2.1	Watershed transform.....	
8.2.2	Maximally Stable Extremal Regions.....	
8.2.3	Superpixels.....	
8.2.3.1	Basic Techniques and Normalised Cuts.....	
8.2.3.2	Simple Linear Iterative Clustering (SLIC).....	
8.3	Texture Description and Analysis.....	
8.3.1	What is Texture?.....	
8.3.2	Performance Requirements.....	
8.3.3	Structural Approaches.....	
8.3.4	Statistical Approaches.....	
8.3.4.1	Co-occurrence Matrix.....	
8.3.4.2	Learning based approaches.....	
8.3.5	Combination Approaches.....	
8.3.6	Local Binary Patterns.....	
8.3.7	Other Approaches.....	
8.3.8	Segmentation by Texture.....	
8.4	Further Reading.....	
8.5	Chapter 8 References.....	

## 9 Moving Object Detection and Description

9.1	Overview.....	
9.2	Moving Object Detection.....	
9.2.1	Basic Approaches.....	
9.2.1.1	Detection by Subtracting the Background.....	
9.2.1.2	Improving Quality by Morphology.....	
9.2.2	Modelling and Adapting to the (Static) Background.....	
9.2.3	Background Segmentation by Thresholding.....	
9.2.4	Problems and Advances.....	
9.3	Tracking Moving Features.....	
9.3.1	Tracking Moving Objects.....	
9.3.2	Tracking by Local Search.....	

9.3.3	Problems in Tracking.....	
9.3.4	Approaches to Tracking.....	
9.3.5	MeanShift and Camshift.....	
9.3.5.1	Kernel-Based Density Estimation.....	
9.3.5.2	MeanShift Tracking.....	
9.3.5.3	Camshift Technique.....	
9.3.6	Other Approaches.....	
9.4	Moving Feature Extraction and Description.....	
9.4.1	Moving (Biological) Shape Analysis.....	
9.4.2	Space-Time Interest Points.....	
9.4.3	Detecting Moving Shapes by Shape Matching in Image Sequences.....	
9.4.4	Moving Shape Description.....	
9.5	Further Reading.....	
9.6	Chapter 9 References.....	

## 10 Camera Geometry Fundamentals

10.1	Overview.....	
10.2	Projective Space.....	
10.2.1	Homogeneous co-ordinates and Projective Geometry.....	
10.2.2	Representation of a Line, Duality and Ideal Points.....	
10.2.3	Transformations in the Projective Space.....	
10.2.4	Computing a Planar Homography.....	
10.3	The Perspective Camera.....	
10.3.1	Perspective Camera Model.....	
10.3.2	Parameters of the Perspective Camera Model.....	
10.3.3	Computing a Projection from an Image.....	
10.4	Affine Camera.....	
10.4.1	Affine Camera Model.....	
10.4.2	Affine Camera Model and the Perspective Projection.....	
10.4.3	Parameters of the Affine Camera Model.....	
10.5	Weak Perspective Model.....	
10.6	Discussion.....	
10.7	Further Reading.....	
10.8	Chapter 10 References.....	

## 11 Colour Images

11.1	Overview.....	
11.2	Colour Image Theory.....	
11.2.1	Colour Images.....	
11.2.2	Tristimulus Theory.....	
11.2.3	The Colourimetric Equation.....	
11.2.4	Luminosity Function.....	
11.3	Perception based Colour Models: The CIE RGB and CIE XYZ.....	

11.3.1	CIE RGB Colour Model: Wright-Guild Data .....
11.3.2	CIE RGB Colour Matching Functions .....
11.3.3	CIE RGB Chromaticity Diagram and Chromaticity Coordinates .....
11.3.4	CIE XYZ Colour Model .....
11.3.5	CIE XYZ Colour Matching Functions .....
11.3.6	XYZ Chromaticity Diagram .....
11.3.7	Uniform Colour Spaces: CIE LUV and CIE LAB .....
11.4	Additive and Subtractive Colour Models
11.4.1	RGB and CMY .....
11.4.2	Transformation between RGB Models .....
11.4.3	Transformation between RGB and CMY Models .....
11.5	Luminance and Chrominance Colour Models
11.5.1	YUV, YIQ and YCbCr Models .....
11.5.2	Luminance and Gamma Correction .....
11.5.3	Chrominance .....
11.5.4	Transformations between YUV, YIQ and RGB Colour Models .....
11.5.5	Colour Model for Component Video: YPbPr .....
11.5.6	Colour Model for Digital Video: YCbCr .....
11.6	Additive Perceptual Colour Models
11.6.1	The HSV and HLS Colour Models .....
11.6.2	The Hexagonal Model: HSV .....
11.6.3	The Triangular Model: HLS .....
11.6.4	Transformation between HLS and RGB .....
11.7	More Colour Models
11.8	Chapter 11 References

## 12 Distance, Classification and Learning

12.1	Overview .....
12.2	Basis of Classification and Learning .....
12.3	Distance and Classification .....
12.3.1	Distance Measures .....
12.3.1.1	Manhattan and Euclidean, $L_p$ norms .....
12.3.1.2	Mahalanobis, Bhattacharyya and Matusita .....
12.3.1.3	Histogram Intersection, $\chi^2$ and the Earth Mover's Distanc .....
12.3.2	The k-Nearest Neighbour for Classification .....
12.4	Neural Networks and Support Vector Machines .....
12.5	Deep Learning .....
12.5.1	Basis of Deep Learning .....
12.5.2	Major Deep Learning Architectures .....
12.5.3	Deep Learning for Feature Extraction .....
12.5.4	Deep Learning Performance Evaluation .....
12.6	Further Reading .....
12.7	Chapter 12 References .....
